DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Li et al. (US Patent 5,149,512).

Applicant claims a method for the selective catalytic reduction of nitrous oxide in the presence of a solid catalyst, with the addition of a saturated hydrocarbon as a reducing agent, characterized in that the catalyst used is a promoted iron-containing zeolite.

Li et al. discloses a catalytic reduction process for the reduction of nitrogen oxides using methane in the presence of oxygen. Li et al. continues to disclose wherein methane serves as a reducing agent and the catalyst is a promoted iron-containing zeolite. The catalyst may also be promoted with a precious metal, such as rhodium (see abstract). The term NO_x includes nitrous oxide (col. 3, lines 56-58). The methane/NO_x ratio ranges from 0.2 to 10 (col. 8, lines 27-37). The process is carried out at a temperature of about 250°C and pressures between about 1 and 300 atmospheres (col. 8, lines 18-26). Since, Li et al. discloses the same process, it would have been inherent and anticipated to achieve the emission of carbon monoxide and of the hydrocarbon being less than 100 ppmv, which also reads on zero.
